

For download and upload, please stay in a **local** terminal, not a server terminal.

Assume that you already downloaded two files to your local computer via Chrome/Firefox/IE/Safari.....

For Windows users, y'all are smart to quickly locate downloaded files in a window environment, right?

1. In a local terminal, please type:

`scp /mnt/c/Users/xzl0031/Downloads/Readme.txt xzl0031@scp.eng.auburn.edu:/home/cse_h1/xzl0031`

a space

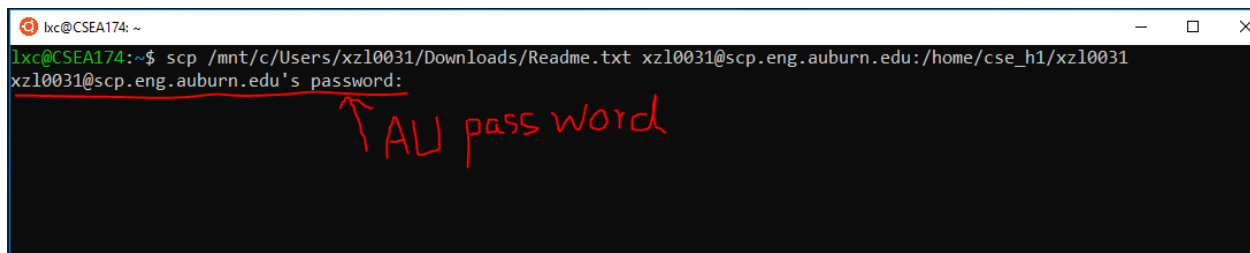

a space

Please type your own username

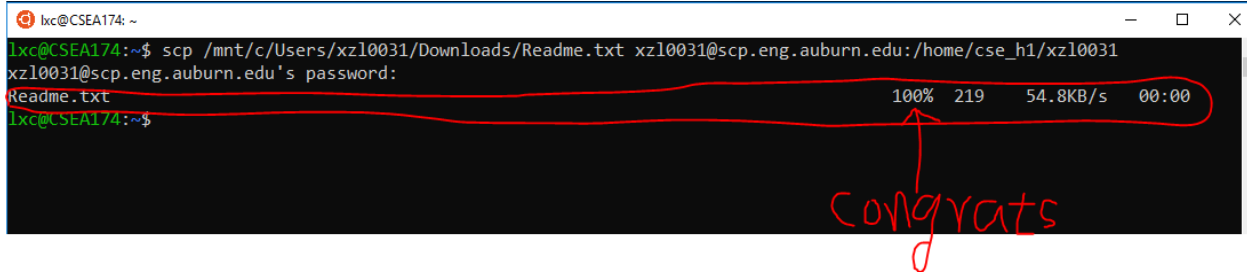

How to know your own directory? See FAQ 1

2. Please enter your password.

### 3. Congrats!

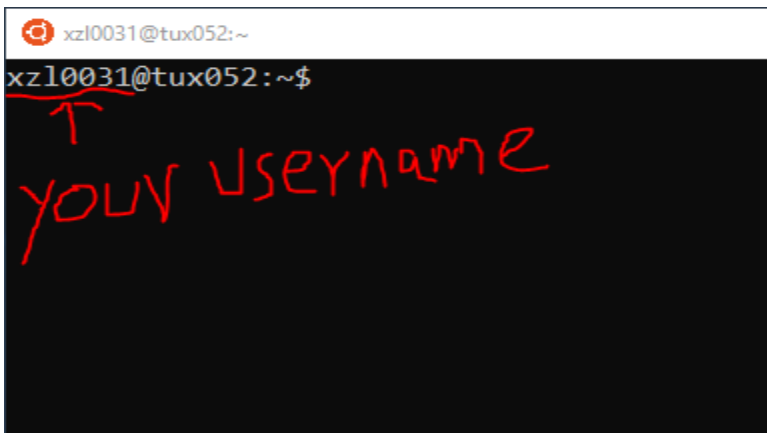

```
lxc@CSEA174: ~  
lxc@CSEA174:~$ scp /mnt/c/Users/xz10031/Downloads/Readme.txt xz10031@scp.eng.auburn.edu:/home/cse_h1/xz10031  
xz10031@scp.eng.auburn.edu's password:  
Readme.txt 100% 219 54.8KB/s 00:00  
lxc@CSEA174:~$
```

Congrats

4. Similarly please upload the second file to the server.

Until now I am assuming that you already successfully uploaded two files to the server.

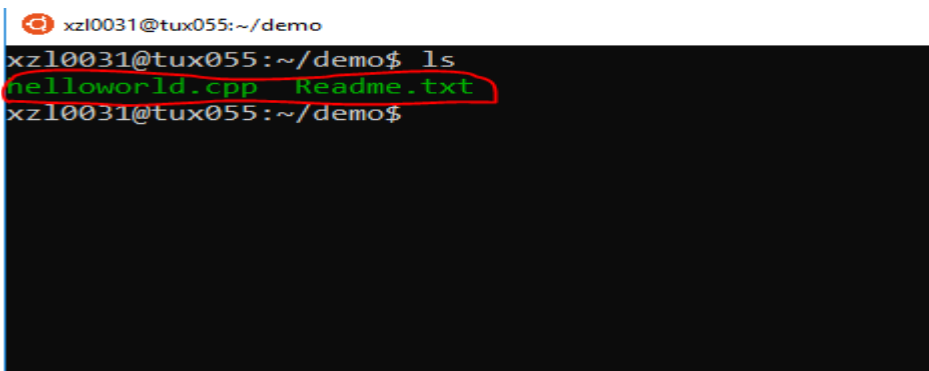

5. Please launch a new terminal and log in (Don't close your previous terminal). Once successfully login to the AU server, you will see a screenshot below.

```
xz10031@tux052:~  
xz10031@tux052:~$
```

YOUR USERNAME

6. Please type two letters: ls ----->You will see both files.

```
xz10031@tux055:~/demo  
xz10031@tux055:~/demo$ ls  
nelloworld.cpp Readme.txt  
xz10031@tux055:~/demo$
```

7. To create a folder, please type a command: mkdir Quiz1

```
xzl0031@tux055:~/demo
xzl0031@tux055:~/demo$ ls
helloworld.cpp  Readme.txt
xzl0031@tux055:~/demo$ mkdir Quiz1
```

a space

a space

8. To move two files into a Quiz1 folder, please type:

mv helloworld.cpp Readme.txt Quiz1/

a space      a space      a space

```
xzl0031@tux055:~/demo
xzl0031@tux055:~/demo$ mv helloworld.cpp Readme.txt Quiz1/
```

8.1 Please edit your .cpp file based on Readme.txt

8.1.1 Scenario1: how to open/create a .cpp file

Type “vi helloworld.cpp”

8.1.2 Scenario2: how to edit your code.

Click “i”(now your file is in an “edit/insert” mode). And then feel free to type your code.

8.1.3 Scenario3: how to save your code.

Once finishing editions in the comment section, press “Esc”( now your file exists from an “edit” mode) -> type “:wq”(wq: write back mode) -> click “Enter”.

8.1.4 Scenario4: how to compile your code.

Option1: g++ helloworld.cpp (g++ compiler will automatically generate the “a.out” as an executive file)

Option2: g++ helloworld.cpp -o helloworld (users will manually select a favorite name as an executive file name)

Executive files end with .out

8.1.5 Scenario5: how to execute your code.

Type “./your executive file”

9. Compress it!

tar -czvf Quiz1\_xz10031.tar.gz Quiz1/

xz10031@tux055:~/demo

xz10031@tux055:~/demo\$ tar -czvf Quiz1\_xz10031.tar.gz Quiz1/

↑ ↑  
space

↑  
space

10. Once click Enter, you will see what folders and files you are compressing.

```
xzl0031@tux055:~/demo$ tar -czvf Quiz1_xzl0031.tar.gz Quiz1/  
Quiz1/  
Quiz1/helloworld.cpp  
Quiz1/Readme.txt  
xzl0031@tux055:~/demo$
```

*Handwritten red text: } ← compressed*

11. Please type **ls** again.

```
xzl0031@tux055:~/demo$ tar -czvf Quiz1_xzl0031.tar.gz Quiz1/  
Quiz1/  
Quiz1/helloworld.cpp  
Quiz1/Readme.txt  
xzl0031@tux055:~/demo$ ls  
Quiz1 Quiz1_xzl0031.tar.gz  
xzl0031@tux055:~/demo$
```

*Handwritten red text: congrats*

Please download it to your local computer.

12. Go back to your **local** terminal (not a **server** terminal )

```
lxc@CSEA174:~$ <---This is a local terminal
```

13. Type:

*Annotations for the scp command:*

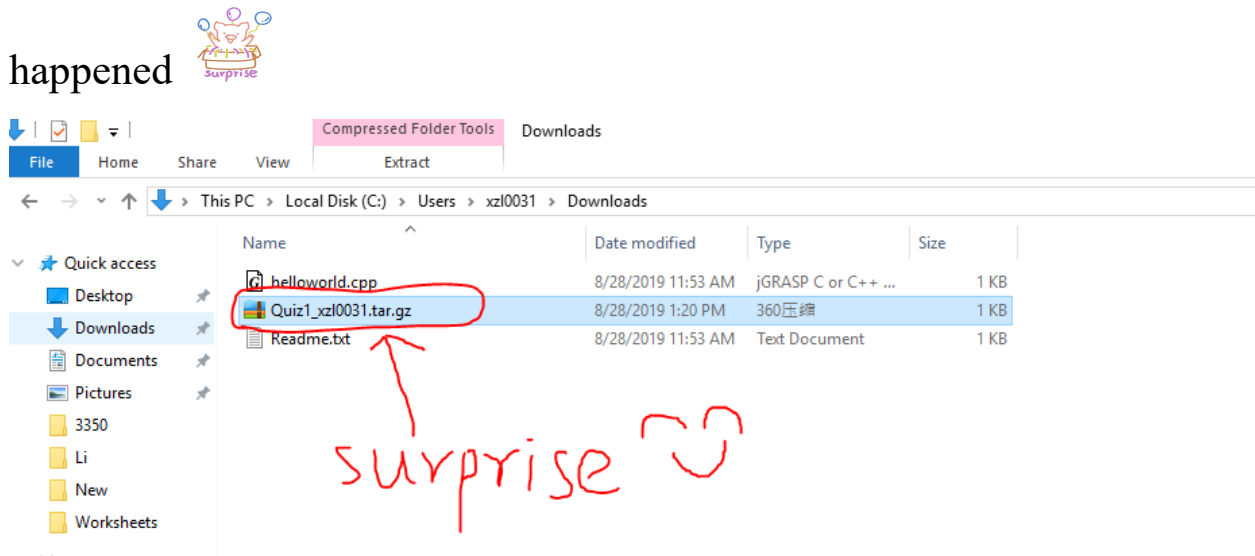

- Please type your own username** (points to `xzl0031`)
- Please find your own path** (points to `/home/cse_h1/xzl0031/Quiz1_xzl0031.tar.gz`)
- Please type your own username** (points to `xzl0031` in the destination path)
- a space** (points to the space between `xzl0031` and `@`)
- a space** (points to the space between `.tar.gz` and `/mnt`)

```
scp xzl0031@scp.eng.auburn.edu:/home/cse_h1/xzl0031/Quiz1_xzl0031.tar.gz /mnt/c/Users/xzl0031/Downloads/
```

```
lxc@CSEA174: ~$ scp xz10031@scp.eng.auburn.edu:/home/cse_h1/xz10031/demo/Quiz1_xz10031.tar.gz /mnt/c/Users/xz10031/Downloads/
```

14. Please go back to your original windows diagram to see what happened

FAQ1.

How to know my own home directory in the AU server? I hate Dr Li's home directory 🤔

Answer: Please login to the AU server with your AU username and you will see:

```
xzl0031@tux052:~  
xzl0031@tux052:~$  
↑  
YOUR USERNAME
```

Please type 3 letters: pwd

```
xzl0031@tux052:~  
xzl0031@tux052:~$ pwd
```

Once click Enter, you will see your own home directory in the AU server

```
xzl0031@tux052:~  
xzl0031@tux052:~$ pwd  
/home/cse_h1/xzl0031  
xzl0031@tux052:~$
```

Please replace Dr Li's home directory (marked by red) in step 1 with yours.
